

Data flows on MSP plan data

- No reporting requirement in the MSPD – How to make plan data available? → TEG Guideline specification (what model to use)

- How to make the data flow?
 - Pull / push?

- Good practices from some countries adapting the data (e.g. Denmark, Italy, France)
- Fluent communication to report feedback on the output (e.g. Poland, Germany)

- As discussed before in TEG: Preferred: Pull process (initiation: EMODnet when MS makes available a plan, data request is created)
- → **Clarify in TEG recommendation? + Metadata sharing?**

- What kind of **support** would be needed for MS? TEG as platform?
 - Experiences from MS that have delivered a plan?
- Related to: **Metadata standard** (what metadata is there currently available from EMODnet?)
